

EXOLUTION

REDACT • PSEUDONYMIZE • ANONYMIZE

15+ years ago, native review became the norm in eDiscovery, but not native redaction. Conversion to image for redaction has continued but it is slow, costly, and cumbersome. Litexn created Exolution back in 2015 to make native redaction the industry standard and bridge the gap.

Exolution has been leading the change ever since and now has established standards in - range of native files, large file size, and redaction speed. Supported file types include Excel, CSV, ODS, PDF, Word, ODT, MHT, EML, RTF, TXT, and TIFF.

More feature-rich than ever, Exolution is an all-in-one solution for redaction, pseudonymization (masking), and anonymization needs.

Don't Produce What You Can't See

Discover invisible and hidden data that traditional methods can't

Dual User-Interface

Web-viewer for convenience
Desktop-viewer for large files

Millions of Redactions in Minutes

Search and redact millions of values across large document collections in minutes

Quick and easy to integrate with review platforms

Exolution is a feature-rich, fast, and user-friendly native redaction technology that can reduce the time, cost, and pain of redaction by over 90%. Automated PII & PHI detection and mass redaction, combined with a variety of search and redact options make it the perfect solution for compliance with data privacy laws like GDPR, FOIA, HIPPA, CCPA ...

Big files mean big trouble without Exolution. Process, display, and redact native files as large as 2 GB in Exolution!

Key Features:

Expose Hidden and Protected Content

Reduce the chances of spoliation of critical, password-protected, or invisible content. Automatically remove internal passwords to make all data visible, identify data located beyond the page boundary or cell display limits, and find invisible data with the same text and background colors.

Search and Instantly Redact

Why deal with the anxiety of never-ending and unpredictable auto redaction batches? Instead, run a document level or global search in Exolution, review the results, and make millions of redactions in minutes. Pattern and value-list redactions are easier than ever.

Advanced Features to Handle Spreadsheets

Spreadsheet documents are uniquely complex which makes them difficult to review and redact. Exolution is jam-packed with many advanced features to handle a large number of spreadsheet documents efficiently.

- Automatically unhide all hidden rows, columns, sheets, and very-hidden sheets including password-protected sheets by removing internal passwords
- Filter rows just like in MS Excel and mass redact
- Identify duplicate sheets across non-duplicate documents, or visually similar sheets, and redact. Spreadsheet threading is available too
- Don't risk reviewers missing scattered data residing in remote rows and columns by hiding consecutive empty rows and columns
- Comprehensive inverse redaction options at sheet and file levels

Innovative PII Explorer

The PII Explorer can redact millions of PII values in a few clicks. Identify major bank card numbers, SSNs, and birth dates, or add your own custom PII types, keywords, or regular expressions.

Redaction Collision Detection

Integrated redaction collision detection prevents overlapping redactions and redacts only the unredacted portion.

Color-Coded and Point-n-Click Redactions

Easily create and locate redactions by associating redaction types with colors. Select an area or object to be redacted and add or remove redactions with a mouse click.

Quick and Accurate TIFF Redaction

Search and accurately redact hundreds of thousands of pages in minutes. Free of character interpretation issues like confusions between '0' and 'o' and '1' and 'l'. Effectively search multi-line data, like addresses.

Real-time Redaction Propagation

Redact all duplicates in real-time without any extra steps.

Pseudonymization (Masking)

Keep entity-relationships visible by redacting values with associated masking values.

RaaS (Redaction as a Service)

An out-of-the-box solution may not be an option in some situations. Large volumes and complex redaction criteria may require consulting redaction technology experts. RaaS from Litexn is a handy service to tackle such situations.

As the creator of industry-leading redaction technology, Litexn has in-depth expertise in native document structures and redaction technologies.

Litexn offers this hard-earned expertise to quickly and accurately apply customized redactions based on complex specifications on native and rendered documents. Provide unredacted documents with redaction criteria and receive redacted documents from us.

About Litexn

The redaction of sensitive information in large collections of electronic documents is one of the toughest problems in electronic discovery. Litexn is focused on developing cutting edge technologies to automate mass redactions in native and rendered documents. Litexn's flagship software, Exolution, is trusted by law firms, auditors, education institutes, and government agencies worldwide.
